PRESS RELEASE   FOR IMMEDIATE RELEASE

NEW MEDIAMAX AUDIODECK™ MULTI-ROOM DIGITAL MUSIC SYSTEM

Adds the Ultimate Music Experience to the Ultimate Movie Experience

Salt Lake City, Utah USA - March 30th, 2006 – Axonix Corporation, the leader in Multimedia Entertainment Servers, announces the addition of a new music player to its MediaMax™ line of Entertainment Systems at the EH Expo in Orlando Florida, booth 1152.

AudioDeck™ is an affordable music player that allows users to add uncompromised digital music to any room at one half the price of the company's movie and music MediaDeck player.

AudioDeck is the perfect add-on music player to the MediaMax entertainment system.

Integrators no longer need to install and support multiple music and movie servers to meet the needs of their customers. A MediaMax AudioDeck system combines the best features of both a music and movie server into a single, affordable and easily scaleable media server system.

Simply plug an AudioDeck into a set of speakers or digital receiver and start playing any music, in any room, any time. The AudioDeck's onboard aqua blue display eliminates the need for a TV display or remote control display.

Loading, managing and playing your music is simple and intuitive.

Load music CDs, downloaded MP3s and other music files onto the MediaMax Server and instantly your music collection is organized into its proper directory of genre, artist and album. Music cover art retrieval is powered by the AMG® LASSO™ media recognition service.

AudioDeck™ Features

-AudioDeck offers the broadest interoperability with virtually any control system including wireless handheld touch screen PocketPCs, home PCs and advanced home automation controllers such as Crestron®, Control4® and AMX®. Virtually any Web device including the Axonix MediaDeck can browse CD music cover art, create playlists and instantly play music.

-AudioDeck's wired and wireless 802.11g/b models allow it to be installed practically anywhere.

-AudioDeck is scaleable. Unlike music only servers that are limited to 4 zones per server, the AudioDeck is a true digital networked audio player. Add as many AudioDecks whenever and wherever you like. It does not require a managed switch like some digital audio systems.

AudioDeck's exciting new Pandora™ service allows you to create your own personalized Internet music station. Simply enter in an artist or song and the service auto-creates a "station" tailored to your musical taste. Using a Tivo like "thumbs up or down" approach the service auto-suggests and creates your own personalized music station.

AudioDeck™ Features continued

-On-the-fly music "juke box" mode Queuing and playlist creation using high quality cover art.

-Play music in one room or in a "party mode" multi-room synchronized mode.

-Supports virtually every audio format including MP3. WAV, WMA, FLAC, AAC, and Ogg Vorbis.

-Plays unlocked iPOD music, PODcasts, Shoutcast stations and Internet radio stations.

-AudioDeck is Windows® Network compatible, so playing existing music or transferring and storing music files onto the MediaMax across the home network is a breeze.

-Locally controllable using any IR remote control and its attractive aqua blue clock display.

-Includes both analog and digital audio outputs on every audio channel.

-Available in either stylish brushed silver, compact desktop enclosure or rackmount chassis.

Availability

The AudioDeck product line will be available May 2006.

AudioDeck is sold exclusively through the company's worldwide network of 300 **H**igh-end **I**ntegration **P**artners (HIPs).

Pricing

Retail pricing is $595 for the AudioDeck Wired Desktop model and $695 for the Wireless model.

Retail pricing for the AudioDeck Quad Wired Rackmount model that includes 4 individual audio channels is $2,995. All models come with an IR hand held remote control.
